

OpenHand in the NHS

Fast, secure, real-time access to your email, calendar, contacts, tasks and public folders from almost any mobile device, worldwide.

OpenHand™ is the product for the new generation of healthcare professionals requiring mobile solutions to ensure maximum efficiency. It's not only a real-time access to your email, but also to your diary, contacts, tasks and public folder documents – without the need for synchronisation.

All information is stored on the email server inside your organisation's secure environment with access fully encrypted and password protected. The user is able to search and sort emails on the server, and mirror selected information if security policy allows.

"Simple but brilliant."
*(André Gorvel,
Kleinwort Benson
Head of Information
Security)*

OpenHand™ is a unique mobile email solution which enables real-time, remote access. Other products rely on synchronisation where emails are pushed over the air and contacts and calendar need to be synchronised at the desktop.

There are clear advantages to **OpenHand™**;

- data is not stored on the mobile device which is a risk acknowledged by security and compliance managers,
- immediate access to all email and information in public folders is available, synchronised solutions can not offer this functionality,
- most device platforms are supported together with all major networks, so there is no lock-in to proprietary devices and networks, and
- efficient transfer of data results in very low charges.

Main Features

- View, create, send and receive email and attachments.
- View, create and update appointments in real-time (no risk of double-booking).
- View, create and update contacts and tasks.
- New email notification.
- Full search and sorting.
- Selected mirroring.
- Access to shared documents in Exchange Public Folders.
- Compatible with most smartphones, PDAs and laptops – no need to purchase dedicated mobile devices with limited functionality.
- No data stored on the device, unless permitted by the server and specifically requested by the user.
- If the device is lost or stolen, company's data is not at risk.
- Local security encryption on the device.
- Global access – use any network, such as GPRS/HSCSD/GSM, WCDMA, etc. OpenHand is network independent and works also on dial-up connection and Wi-Fi.
- Wherever you can make a mobile voice call OpenHand is available.
- OpenHand's superior speed and advanced compression means enjoyable user experience with remarkably low data charges.

OpenHand Software Ltd. develops and integrates mobile solutions to help Corporates, Telecoms and Government bodies increase productivity and improve efficiency by making it possible and practical to run business applications over mobile networks.

“OpenHand technology has been accepted for use within the NHS Network.”

“I tested OpenHand... and found it a delight”
Paul Taylor
Financial Times
8th September 2004

Advanced Security

OpenHand™ applies industry standard algorithms - Advanced Encryption Standard (AES) 128/256 bit - to safeguard all data transferred. CAPS-standard, SSL, VPN and IPSec VPN is supported where applicable.

OpenHand™ connects directly to the servers, inside the firewall and does not require data mirroring. No information is stored on the mobile device - data is not at risk if the device is lost or stolen.

Total Independence

OpenHand™ mobile email puts the user in charge. It is compatible with most, Smartphones, PDA's and laptops, so there is no need to purchase extra dedicated devices with limited functionality.

OpenHand™ supports the most widely available wireless network protocols, including GSM, GPRS, WCDMA, CDMA, TETRA, Bluetooth PAN and WiFi.

The OpenHand server software is simple and non-intrusive - no changes to the Microsoft® Exchange or Lotus Notes® mail server are required. Client software is also designed for ease of use with an interface that matches the device. OpenHand is highly cost effective.

Future proof

The **OpenHand™** Framework provides the facility for the easy mobilization of third party applications.

What do Users say?

“We completed various cost comparisons with the market leaders ... We found that OpenHand Software offered us the best value for money”

John Attwood, Surrey and Sussex SHA, NHS

“The take up of OpenHand created responses far beyond our anticipation”

Shaun Jeffrey, ICT Manager, Newham University Hospital NHS Trust

“Using OpenHand my data bill has never exceeded £3.50 per month”

Tony Gale, Fujitsu Services

OpenHand is the best of breed solution in all areas; speed of access, level of security and operational cost”

Nick Quelch, Director, ISL.com
